Project Sprint #1

The Solitaire game is described in CS449HomeworkOverview. You should read the description very carefully.

In this assignment, you aim to specify the requirements (i.e., user stories and acceptance criteria) of the target software that allows a human player to play a Solitaire game. These requirements will be fully implemented by the end of sprint 3. The minimum features include **choosing the board size and type, starting a new game**, **making a move, determining if a game is over**. The following is a sample GUI layout.

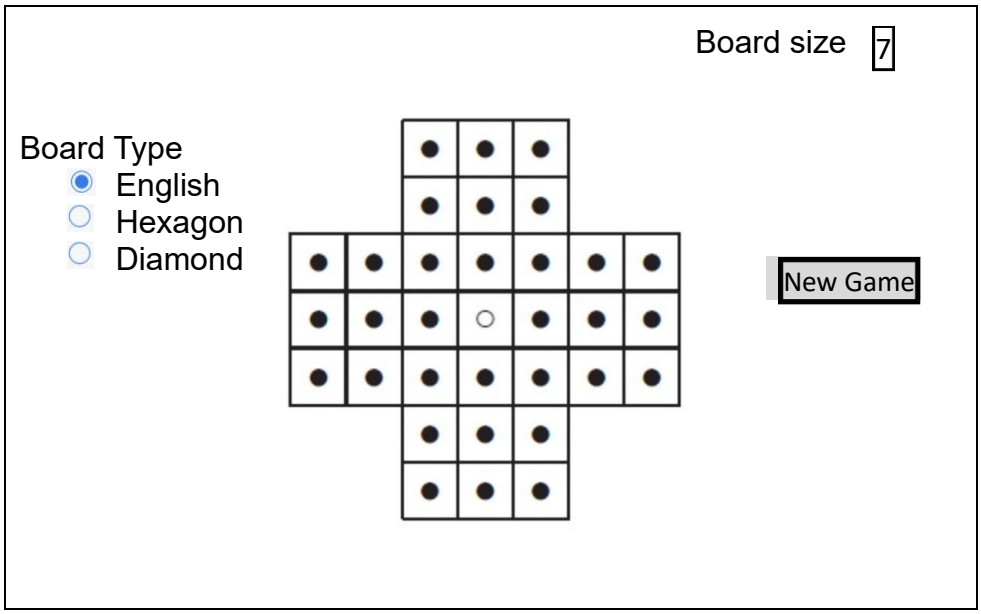

Figure 1. Sample GUI layout of the first working program by the end of Sprint 3

Use the following tables to document your user stories and acceptance criteria.

You are required to use the free ChatGPT or another LLM to complete two user stories and two of their respective acceptance criteria. You must ensure that the generated user stories are correct and fix them if not. At the end of the submission, provide screenshots of your LLM prompts and answers, along with the description of errors the LLM made that you had to correct. Points will be deducted if no screenshots/description are provided.

For the other user stories and acceptance criteria, you are not required to use LLM.

I. User Stories (3 points)

- **User Story Template**: As a <role>, I want <goal> [so that <benefit>]

ID	User Story Name	User Story Description	Priority	Estimated effort (hours)
1	Choose a board size	As a player, I want to choose the board size before starting the game so that I can play with my preferred level of difficulty.	High	2 hours
2	Choose the board type	As a player, I want to select the board type before starting the game so that I can play the Solitaire variant I prefer.	High	2 hours

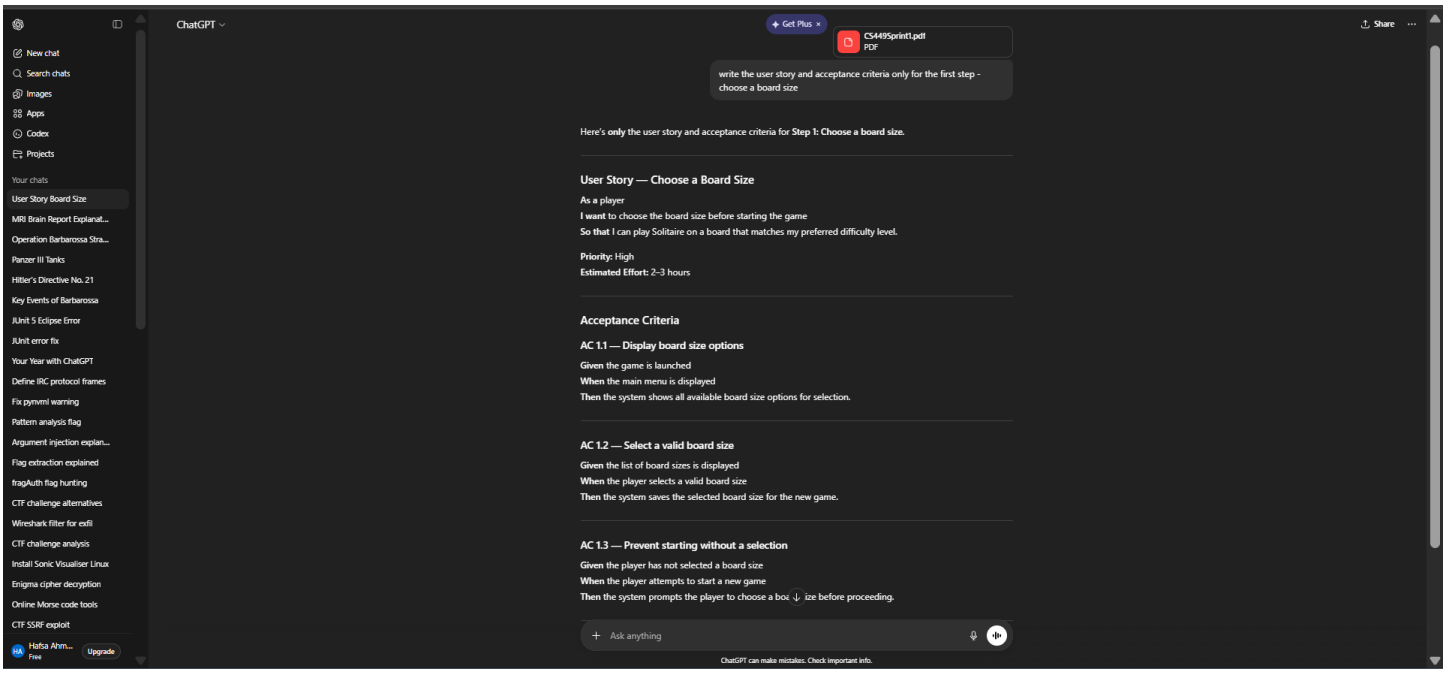
3	Start a new game of the chosen board size and type	As a player, I want to play the game with my selected board size and type so I can play the game based on my set preferences.	High	2 hours
4	Make a move in a game	As a player, I want to make a move in the game so that I can solve the Solitaire board.	High	3-4 hours
5	A game is over	As a player, I want to know when I can't make any more moves so that I know that the game is over.	High	1 hour

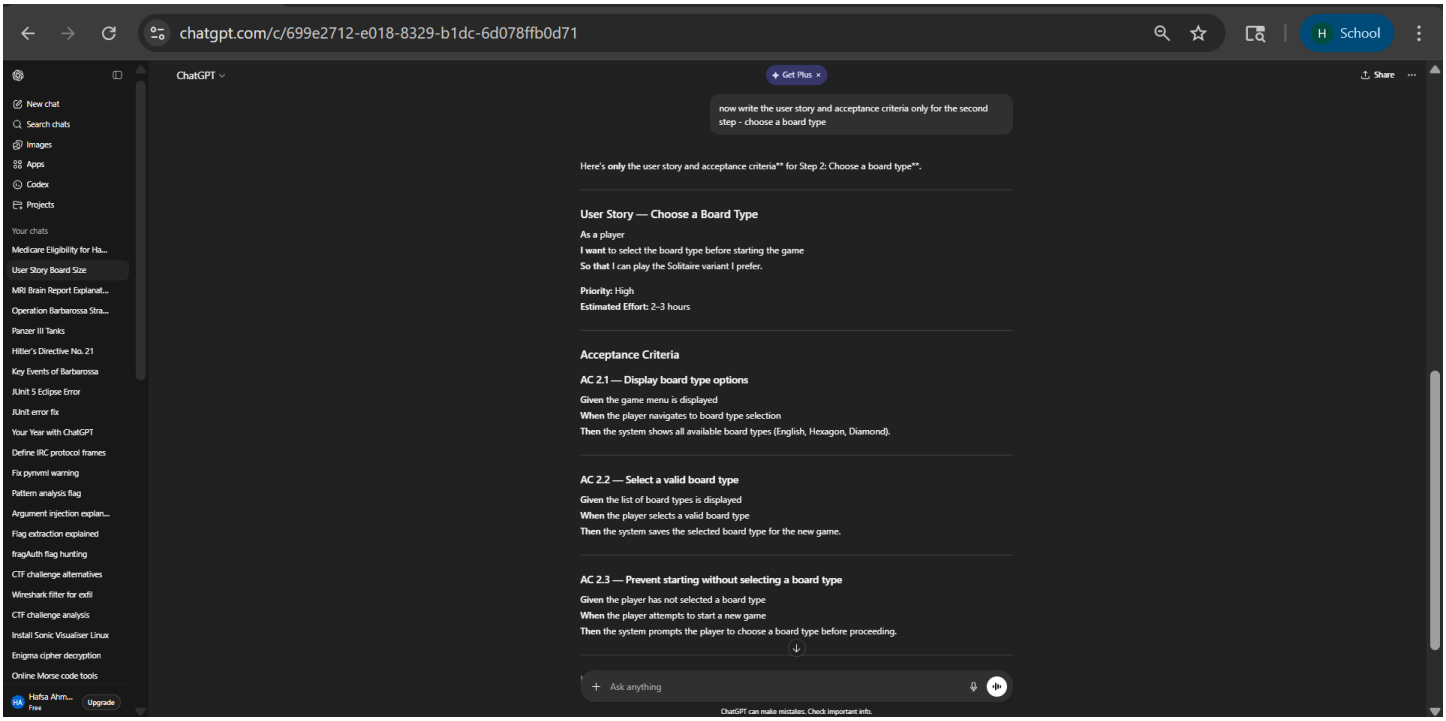
II. Acceptance Criteria (AC) (12 points): Add/delete rows as needed.

User Story ID and Name	AC ID	Description of Acceptance Criterion	Status (completed, toDo, inPprogress)
1. Choose a board size	1.1	AC 1.1 – Display board size options Given the game is launched When the main menu is displayed Then the system shows all available board size options for selection.	Todo
	1.2	AC 1.2 – Select a valid board size Given the list of board sizes is displayed When the player selects a valid board size Then the system saves the selected board size for the new game.	Todo
	1.3	AC 1.3 – Prevent starting without a selection Given the player has not selected a board size When the player attempts to start a new game Then the system prompts the player to choose a board size before proceeding.	Todo
2. Choose the board type	2.1	AC 2.1 – Display board type options Given the game menu is displayed When the player navigates to board type selection Then the system shows all available board types (English, Hexagon, Diamond).	Todo
	2.2	AC 2.2 – Select a valid board type Given the list of board types is displayed When the player selects a valid board type Then the system saves the selected board type for the new game.	Todo
	2.3	AC 2.3 – Prevent starting without selecting a board type Given the player has not selected a board type When the player attempts to start a new game Then the system prompts the player to choose a board type before proceeding.	Todo
3. Start a new game of the chosen board size and type	3.1	AC 3.1 – Start a new game with the player's chosen preferences Given the player has selected a valid board size and type When the player clicks the "Start new game" button on the game Then the system starts a new game with the player's chosen preferences And the game correctly displays the user's set configuration	Todo
	3.2	AC 3.2 – Reset the previous game's state Given the previous game was still in progress When the player clicks the "Start new game" button Then the system clears the old board of the game And resets the game's state	ToDo

4. Make a move in the game	4.1	AC 4.1 – Only a legal move is allowed Given that a game is in progress And a legal move is available for the user When the player makes a legal move Then the system places peg to the target location And removes the jumped peg And updates the current board configuration.	Todo
	4.2	AC 4.2 – Illegal moves are not allowed Given that a game is in progress When the player makes an illegal move Then the system displays an error message to the user And the system does not change the board configuration	Todo
5. A game is over	5.1	AC 5.1 – The player wins Given that a game is in progress When there is only one peg left on the board Then the system considers the game over And a winning and game-over message is displayed	ToDo
	5.2	AC 5.2 – No legal moves remaining Given that a game is in progress When there are no legal moves remaining for the player Then the system considers the game over And a game-over message is displayed	Todo

ChatGPT Screenshots





I didn't find any errors in the LLM responses that needed to be corrected. I slightly altered the wording on some of the user stories and acceptance criteria.
